we care for water

PORTFOLIO

United Nations North Lawn Building New York City, NY

The United Nations (UN) North Lawn Conference Building was designed to be a recyclable building with permanent floors and drainage for almost all of the UN Headquarters' conference facilities.

Project Design Brief

The UN North Lawn Conference Building's engineers needed drainage to remove storm water from the pedestrian area when designing the conference area. They discovered that a standard drain did not meet the project's requirements and instead opted for ACO's custom trench drains.

Benefits

- Aquaduct is ACO's customizable drain made to fit complex layouts. Dimensional factors such as width, depth, slope, profile, and layout are much easier to design to create the optimum drainage solution.
