

ACO. creating
the future of drainage

PORTFOLIO

United Nations North Lawn Building New York City, NY

The United Nations (UN) North Lawn Conference Building was designed to be a recyclable building with permanent floors and drainage for almost all of the UN Headquarters' conference facilities.

Project Design Brief

The engineers designing the conference area for the UN North Lawn Conference Building needed drainage to remove rainwater from the pedestrian area, but a standard drainage solution would not suit the job.

Benefits

- ACO's custom 8" Fiberglass trench drain system with ADA grates were chosen because of their custom size and versatility.
- Additionally, the ADA grates provided a safe walking surface for pedestrians as well as providing adequate surface water catchment.
