we care for water

PORTFOLIO

Carroll Creek Frederick, MD

Carroll Creek spans more than a mile through the heart of hip and historic Downtown Frederick. This creek walkway offers more than just a beautiful view; it has specialty shops, outdoor dining, breweries, and distilleries. Following two devastating floods in the mid-70s, the city of Frederick undertook an ambitious flood control project to protect its historic downtown from future damage.

Project Design Brief

ACO's K100 with Type 411Q grates were chosen and installed along the creek to maintain the paved walkways safe. The newly installed K100 channels, in conjunction with an underground system, allowed for storm water to safely transit underground in the downtown Frederick region, freeing up ground-level space for the development of the new linear park.

Benefits

- QuickLok® is a patented boltless locking system that allows for simple grate removal for maintenance. The unique design provides a positive snap-down fit into the locking bar.
