

ACO. creating
the future of drainage

PORTFOLIO

Cumberland Park Nashville, TN

Cumberland Park is an innovative play space along the river with a climbing wall, splash areas, amphitheater, and a walking trail. It was designed to provide new public attractions and waterfront access to enjoy the riverbanks of the Cumberland River.

Project Design Brief

To ensure the comfort and safety of visitors to the park, a trench drain was needed to ensure hard paved areas remain puddle free and safe for all users regardless of the weather.

Benefits

- ACO KlassikDrain KS100 and stainless steel longitudinal was used to ensure the aesthetics of the park. The grates provide Load Class B strength which is up to 28,101 lbs or 967 psi.
- The ADA compliant grates withstand traffic while remaining safe for pedestrians in wheelchairs, high heels, or riding bikes.
