

ACO DRAIN

Indianapolis Speedway,
Indianapolis, IN

ACO PORTFOLIO

Product:

FG200 with Ductile Iron slotted grates

In preparation for the annual Indianapolis 500 race the hardstanding around the track was refurbished. This area is where pedestrians gather and vendors set-up food and merchandise stands. A high capacity trench drain was required to ensure quick and effective drainage after a heavy down pour.

The trench also need to be able to withstand loadings from carts and other vehicles that help set up the venue for race days.

ACO FG200 with ductile iron grates was selected for its excellent hydraulic performance and ability to withstand stand the heavy loading required.
