

ACO DRAIN

McGhee Tyson Airport Economy Parking Knoxville, TN

PROJECT PORTFOLIO

Product:

FG200 with ductile iron slotted grates

During the renovation of the parking lot at McGhee Tyson Airport, engineers decided that a trench drain would be needed to drain storm water run off and avoid ponding. This is particularly important because of the pedestrian traffic.

FG200 was selected to provide the necessary hydraulic performance

to ensure all storm water is quickly remove and prevent slipping hazards.

Additionally, the ductile iron grates, can withstand vehicular traffic from airport customers as well as shuttle buses.
