

# ACO DRAIN

## Salt Lake City Airport, UT

## ACO PORTFOLIO

### Product:

### *FG200 with Ductile Iron slotted grates*

Prior to the 2002 Salt Lake Winter Olympics the airport was given a complete upgrade to cope with the additional traffic.

Part of the upgrade included additional taxiway and apron facilities. The long straight runs were ideal for the 3,500 feet of FG200 fiberglass trench drain system fitted with heavy duty (DIN class E) locked, ductile iron slotted grates.

The FG200's excellent hydraulics provided the ideal drainage solution for the wide flat concrete areas, and the lightweight easy to handle 6 feet lengths enabled the contractor to install quickly and easily, thus saving money over alternative methods. The fiberglass channel gives excellent resistance to any de-icing salts used at the airport.
