PORTFOLIO

Sysco Inc. Knoxville, TN

Sysco is the global leader in selling, marketing, and distributing food and non-food products to restaurants, healthcare and educational facilities, lodging establishments, and other customers around the world.

Project Design Brief

During the design planning phase for this new facility, the engineers determined that a trench drain would be needed for the loading and unloading dock area. ACO's FG200 fiberglass drain was the ideal system because of its ability to withstand the heavy load traffic. Furthermore, the FG200 has the necessary hydraulic capacity to satisfy the project's criteria.

Benefits

- The FG200 fiberglass channel with a mounted steel frame provides a quick and simple way to create a smooth, corrosion resistant trench drain.
- The FG200 system is available in twelve, interconnecting, 9-foot long channels with a built in 1.0% slope.
