

ACO DRAIN

**Sysco Inc.
Knoxville, TN**

PROJECT PORTFOLIO

Product:

FG200 with ductile Iron slotted grates

While building this new facility, the engineers decided that a trench drain would be needed in the loading areas to drain storm water run off and avoid ponding the drain needed to withstand a heavy flow of traffic from semi-trucks coming in and out of the yard.

FG200 was selected to provide the necessary hydraulic performance and ensure all storm water is quickly removed from the area.

The 2 bolt locked ductile iron grates are load rated to withstand vehicular traffic from delivery supply trucks.
