FG200 with ADA compliant Ductile Iron slotted grates
Sunland Group, Austin, TX
Ford, Powell, and Carson, San Antonio, TX

While building this new facility, the engineers decided that a trench drain would be needed to drain storm water run off and avoid ponding - this was particularly important as this is a pedestrian plaza.

FG200 was selected to provide the necessary hydraulic performance

and ensure all storm water is quickly removed to prevent a slipping hazard.

By using ADA compliant ductile iron grates, customers are able to cross the trench drain safely, while still providing the strong grates needed to withstand vehicular traffic from delivery supply trucks.
