we care for water

PORTFOLIO

Florida State University - Student Success Center Tallahassee, FL

The Florida State University-Student Success Center, also known as the Academic Center for Excellence, is the university's learning center focused on helping students develop the study skills and success habits that are necessary in a large research university and valued by future employers.

Project Design Brief

The engineers for the renovation project at the Florida State University Student Success Center required a drainage system that would fit into the area's design, which includes five distinct radii and the preservation of a 150-year-old tree. ACO's KlassikDrain KS100 with stainless steel perforated grates were selected for the project because of its adaptability and hydraulic capacity. The ADA-compliant stainless steel grates can handle any light duty traffic in the area while still keeping pedestrians safe.

Benefits

- The 465Q perforated stainless steel grates with the QuickLok® locking system by ACO meets ADA-compliance and are heel resistant.
