

ACO DRAIN

University of South Carolina Pool Columbia, SC

PROJECT PORTFOLIO

Product:

SlabDrain H80 with type 494 ADA Black Plastic Grates

The contractor was looking for a drain that would replace the failing point drains they had previously installed around the pool. The new drains would need to handle water coming out of the pool as well as from cleaning the deck around the area. They were also looking for something aesthetically pleasing.

ACO SlabDrain H80 with black plastic ADA grates was chosen because of slab depth restrictions.

Additionally, the black plastic ADA grates can withstand chemicals from cleaning and are safe for the students as they come in and out of the pool.
