

# ACO DRAIN

## Federal Express Facility New Castle, DE

## PROJECT PORTFOLIO

**Product:**  
**Specifier:**  
**Contractor:**

***K300 KlassikDrain with ductile iron slotted grates***  
***McBride and Ziegler, Newark, DE***  
***Corrado Construction Company, New Castle, DE***

A new FedEx Ground distribution center was designed to replace an existing facility nearby. The new facility provides the opportunity for expansion and modernization. The 186,000 square-foot building will house up to 80 delivery vans and has a 45 door distribution dock where tractor-trailers will load and unload packages.

In order to address storm water drainage in the loading dock area

a 180-foot run of ACO KlassikDrain K300 with Load class E ductile iron QuickLok slotted grates was installed along the dock to ensure the area remained safe and usable during downpours.

Several runs of ACO PowerDrain S100K were also used inside the building to address rain, ice and snow melt from delivery trucks.
