

ACO DRAIN

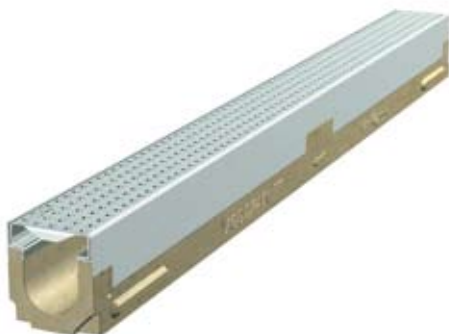

Cross Keys Courtyard Baltimore, MD

ACO PORTFOLIO

Product:

MiniKlassik with perforated stainless steel grates

When a courtyard area in Cross Keys was being renovated, a small perimeter trench drain was needed, but there were several site limitations. The most critical being depth, caused by the underground parking garage located beneath the courtyard area.

The trench drain needed to be visually appealing to fit with the high end shopping facility that surrounded the entire area.

MiniKlassik's overall depth of 3.39" was ideal as it did not interfere with the parking garage structure below. Its discreet size, 2" internal width and availability of stainless steel perforated grates met the project's aesthetic requirements. The perforated grates also comply with ADA legislation, an important consideration for public pedestrian areas.
