

ACO DRAIN

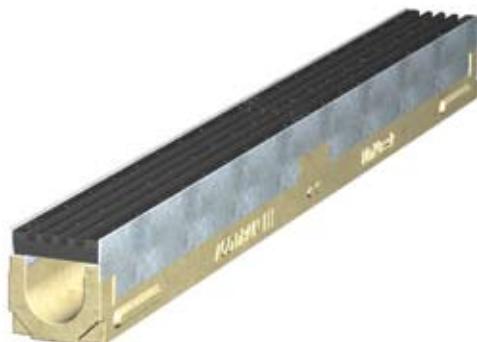

El Segundo Athletic Fields El Segundo, CA

PROJECT PORTFOLIO

Product:

MiniKlassik with ductile iron grates

When the observation deck of the sports complex was being renovated, a small perimeter trench drain system was needed to drain the water run off from the surrounding soccer fields.

The trench drain needed to be visually appealing to fit with the aesthetics of the athletic fields.

MiniKlassik's overall look was ideal to fit in with the aesthetics of the area. Its discreet size, 2" internal width and availability of ductile iron grates met the project's overall requirements. The ductile iron grates also comply with ADA legislation, an important consideration for public pedestrian areas.
