

ACO DRAIN

Mercedes Dealership Wichita, KS

PROJECT PORTFOLIO

Product:

MiniKlassik with perforated stainless steel grates

The designers at this Mercedes Dealership were looking for a discreet, yet luxurious feeling, drainage system that blended with the surroundings without being overpowering. Thus they went with ACO's KS50 MiniKlassik drainage system.

ACO's KS50 MiniKlassik is a 2" internal width system for high profile, aesthetic applications.

The KS50 has a grade 304 stainless steel rail for applications where increased aesthetics or chemical resistance is required and stainless steel perforated grates were added.

All grates have been load tested in accordance with EN 1433 guidelines and the loading for the grate is up to Load Class C.
