

ACO. creating
the future of drainage

PORTFOLIO

Kent Event Center/Showare Center Kent, WA

The Showare Center is home of the Seattle Thunderbirds hockey team and is the first of its kind to make renovations to "go green".

Project Design Brief

These renovations include stormwater reclamation where rainwater is collected and reused for irrigation of the site. Removal of stormwater would also prevent ponding and slip hazards to pedestrians.

Benefits

- ACO KlassikDrain KS100 with stainless steel grates were selected to intercept stormwater in the entrance areas.
- The locked perforated grate is completely ADA and pedestrian safe.
- Aesthetically, the grate fits in well into the overall design of the arena's exterior.
