

ACO. creating  
the future of drainage

## PORTFOLIO

### Michigan State Hall of Justice Lansing, MI

The Michigan State Hall of Justice is a six-story landmark building with two-story basement parking garage. The Supreme Court is housed in a 280,000-square-foot modernist structure.

#### Project Design Brief

Contractors constructed the parking lot at the new Michigan State Hall of Justice utilizing ACO PowerDrain along the elevated curbing to avoid unsightly complex falls needed by surrounding drains. This allowed for simplified and accelerated parking development.

#### Benefits

- The ductile iron grates can withstand the heaviest applications up to Load Class G (AS 3996).
