

ACO. creating
the future of drainage

PORTFOLIO

Mukilteo Staging Area Mukilteo, WA

The staging area in Mukilteo, WA is used to line up vehicles that are waiting for the ferry to cross the Puget Sound. The construction of the staging area was to help ease congestion of the commuter and tourist traffic to the ferry terminal.

Project Design Brief

The engineer was looking for a durable, long lasting trench drain that can withstand the constant movement of traffic and would be able to remove any standing water caused by rain.

Benefits

- ACO S100K PowerDrain system's integrally cast-in ductile iron edge rail offers maximum strength and protection of the channel.
- The ductile iron grates can withstand the constant movement of traffic and any chemicals that may spill from leaky public/personal vehicles.
