

ACO. creating
the future of drainage

PORTFOLIO

Novelty Hill - Januik Winery Woodinville, WA

The Winery at Novelty Hill is a contemporary structure location that draws guests for tastings, conferences, and private occasions.

Project Design Brief

Wineries are areas where spills and frequent washing down of the floors are common. However, due to fruit acids and cleaning chemicals, a corrosion-resistant trench drain is usually required. When designing this new state-of-the-art 3,100 sq ft winery, the specifier wanted to incorporate a trench centrally located between the fermentation vats in the barreling room.

Benefits

- ACO PowerDrain polymer concrete is a natural, high-performance, corrosion-resistant product. In addition, the SK1 ductile iron grates are sturdy enough to withstand the constant movement of carts and forklifts.
