

ACO. creating
the future of drainage

PORTFOLIO

Oakland International Airport Oakland, CA

Oakland International Airport is the 4th largest airport in California with 13 airline brands and over 11 million passengers each year. Oakland International Airport is the closest airport to the region's top tourism and entertainment venues.

Project Design Brief

The apron around Hangers 1-5, where the private jets are housed, was experiencing a flooding issue as the catch basins were not working effectively. During the redesign a cast-in-place system was specified, however, PowerDrain S100K offered comparable hydraulics and is a one-piece unit with grates installed. This provided several time and cost savings during installation

Benefits

- S100K has been tested up to Load Class F for the wide variety of vehicles that would be using the road.
