

ACO. creating
the future of drainage

PORTFOLIO

Santiago Canyon Highway, Orange County, CA

A perilous mile-long stretch known as Santiago Canyon Road has been the site of more than a dozen crashes and two fatalities throughout the last two years. In several of the incidents, torrential rain saturated the pavement, causing vehicles to lose control and cross into the opposite lane. Field tests by traffic engineering experts demanded the best quality safety measure available.

Project Design Brief

The PowerDrain S100K is being installed along a flood-prone stretch of Santiago Canyon Road as part of the solution. The S100K was designed to prevent damage to pavement and reduce safety hazards caused by stormwater runoff or ponding.

Benefits

- SK1 slotted ductile iron grates can withstand the constant movement of vehicle traffic.
