

ACO. creating  
the future of drainage

## PORTFOLIO

### Spokane Transit Authority Spokane, WA

The Spokane Transit is a public transportation system that began operating in 1981. The agency has a service area of 248 miles and houses buses, para-transit vans, and van-pool vans.

#### Project Design Brief

The Spokane Transit Authority needed to replace their trench drain system at their Boone Avenue Fixed Route Garage, as it was 20 years old, and cannot be serviced. This became a safety concern.

#### Benefits

- The PowerDrain high duty sloping system is perfect for situations that require the most robust load capacities
- The slotted ductile iron grate can resist city bus movement as well as any runoff of oils or other contaminants that may run over through the grates into the drains.
