

# ACO DRAIN

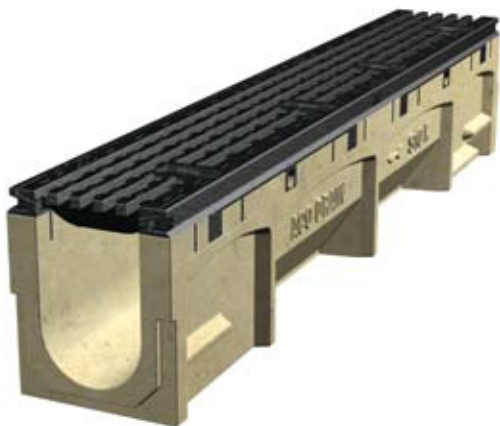

West Hollywood, CA

## ACO PORTFOLIO

### Product:

### *S100K Powerdrain with ductile iron ADA grates*

Spring water seeping out of the ground was creating a hazard to local residents and motorists. The water was running across roads and collecting at the curb. Large amounts of moss were creating a slip hazard to residents and traffic.

The curb inlets were not solving the problem and the road surface was eroding due to the constant ponding of water.

ACO Powerdrain provided the perfect solution as it kept all water off the road surface next to the curb line eliminating ponding and moss growth. As the trench would be trafficked along the curb and across driveways and the road in certain areas a heavy duty system was required.

ACO Drain S100K was used as it is available with ADA compliant grates to maximize pedestrian safety.
