

ACO DRAIN

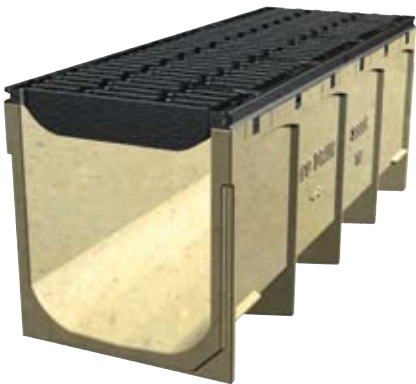

City of Seattle Joint Fire Fighting Training Center Seattle, WA

ACO PORTFOLIO

Product:

S300K with ductile iron slotted grates

The City of Seattle's training center for fire and ambulance services needed a heavy duty drainage system for their new facility.

The ACO Drain S300K with ductile iron slotted grates was the ideal choice to deal with both the large volumes of water and the heavy duty traffic.

The trench drain had to drain the water from the high pressure fire hoses used to extinguish training fires. Additionally, the grates needed to withstand the loads of fire truck and ambulance traffic.
