

ACO. creating
the future of drainage

PORTFOLIO

Joint Firefighting Training Center Seattle, WA

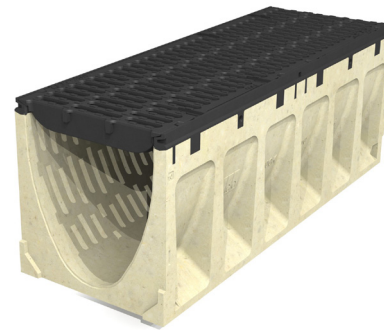

The Joint Training Facility Campus provides a versatile, complex, and durable training center for members of the Seattle Fire Department, Seattle Public Utilities, and the Seattle Department of Transportation.

Project Design Brief

The City of Seattle's training center for fire and ambulance services required a heavy duty drainage system for their new building expansion. ACO's PowerDrain S300K was installed to drain water from high-pressure fire hoses used during fire extinguishing training exercises.

Benefits

- PowerDrain S300K has high hydraulic capacity, enabling removal of large amounts of water in a short period of time.
- The ductile iron grates are rated Load Class F which can withstand the constant movement of emergency vehicles crossing over the grates.
