

ACO. creating
the future of drainage

PORTFOLIO

Davisburg Garage Springfield Township, MI

Davisburg City Garage houses Springfield Township's road maintenance and construction equipment.

Project Design Brief

To capture dirty water from the continuous washing of trucks and machinery, a trench drain system was required. Furthermore, melting snow tracked into the garage during the winter months will need to be drained. A critical requirement specified a product that would be able to withstand the constant heavy loads traveling over the trench drain. The PowerDrain S300K system with slotted ductile iron grates from ACO was chosen because it met these requirements.

Benefits

- S300K hydraulic capacity, enabling removal of large amounts of water in a short amount of time.
- The slotted ductile iron grates are rated Load Class F which can withstand the constant movement of emergency vehicles crossing over the grates.
