

ACO DRAIN

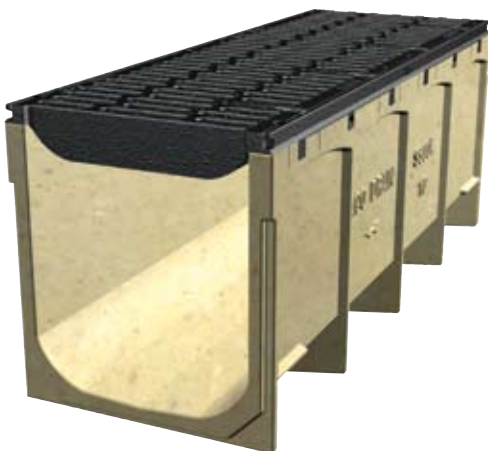

Davisburg Garage Springfield Township, MI

ACO PORTFOLIO

Product:

S300K with ductile iron slotted grates

Springfield Township house their road maintenance and construction machinery at Davisburg Garage.

A trench drain system was needed to capture dirty water from continuous washing of trucks and machinery. In addition, melting snow tracked into the garage during the winter months needed to be drained away. A critical requirement was specifying a product durable enough to handle

the constant heavy loads traveling over the trench drain.

To meet these requirements, ACO's PowerDrain S300K system with ductile iron slotted grates was specified. The Load Class F rating ensures PowerDrain has no problem withstanding daily abuse from heavy trucks and construction vehicles.
