

ACO DRAIN

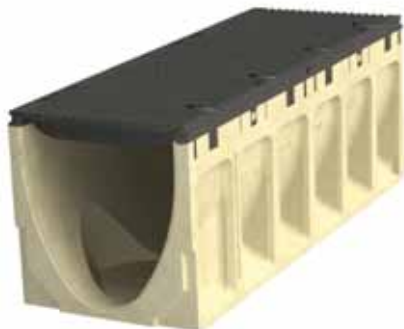

Miramar Streetscape Revitalization Miramar, FL

PROJECT PORTFOLIO

Product:

S300K with ADA ductile iron grates

The City of Miramar, Florida wanted to revitalize street areas and as part of the process, the city decided that new drainage systems should be installed to remove water quickly from the area during any storms or flooding - keeping drivers and pedestrian safety in mind.

Due to constant traffic a heavy duty sloped trench drain system

was needed for this application. PowerDrain S300K features an integrally cast-in ductile iron edge rail, and longitudinally slotted ADA compliant ductile iron grates with a Load Class F (90 ton) loading. This would ensure that the system is safe for pedestrian and heavy truck traffic alike.
