

ACO DRAIN

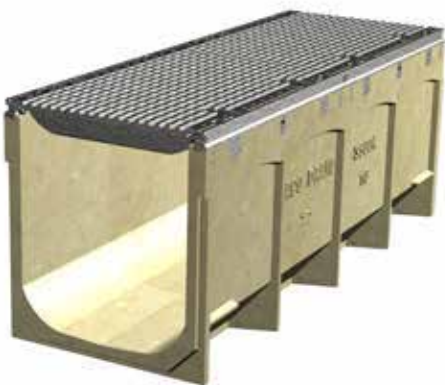

University of Georgia-Reed Plaza/Sanford Stadium Athens, GA

PROJECT PORTFOLIO

Product:

S300K with ADA ductile iron grates

During the revitalization of the stadium alley around Sanford Stadium at the University of Georgia, it was decided that a trench drain system was needed to keep the area free from water.

ACO PowerDrain S300K was chosen because of its large hydraulic capacity which eliminates future problems with ponding water. Any

water run-off from cleaning the area will also be quickly drained away.

Due to the frequent pedestrian traffic, ADA compliant grates were chosen to complete the trench drain system.
