

ACO. creating  
the future of drainage

## PORTFOLIO

### Willoughby Fire Station Willoughby, OH

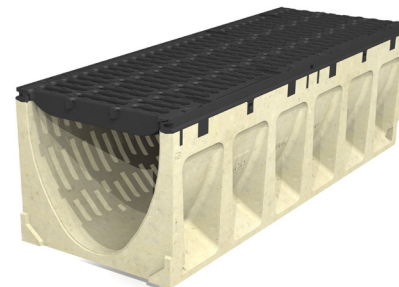

Willoughby Fire Station is an 82 member department that utilizes cutting-edge firefighting technology and emergency medical equipment.

#### Project Design Brief

The fire station had originally specified a 12" internal width cast-in-place trench system to deal with the large volumes of water from hose wash down. The guaranteed consistent quality of a pre-cast, modular, sloped product, coupled with the speed and ease of installation, significantly reduced installation time and costs.

#### Benefits

- The S300K with a Load Class F loading ensures the drainage system can withstand the heavy duty traffic of fire engines crossing over and turning on the drainage system.
