

ACO. creating
the future of drainage

PORTFOLIO

Circle K Casa Grande, AZ

Circle K has become one of the most well-known convenience store brands, with a reputation for high-quality items and excellent customer service. The fueling area had no real drainage solution and safety concerns needed to be addressed.

Project Design Brief

Gas station trench drains get a significant level of traffic from all directions. The various dynamic moving loads require a heavy duty trench system with robust grates. ACO's PowerDrain S300K with longitudinal ductile iron grates have been installed at the entrance and exits. The S300K could effortlessly sustain the continual movement of heavy vehicle and pedestrian traffic.

Benefits

- The PowerDrain S300K features a 12" internal width channel system with built-in 0.5% slope and developed V-shape profile for enhanced hydraulic performance.
