

ACO. creating
the future of drainage

PORTFOLIO

SB Collins Service Station Jericho, VT

SB Collins Service Station needed to solve the issue of constant spills of gasoline and other fluids occurring at the gas pumps. They needed a solution that would be able to withstand the hazardous liquids that were spilled regularly.

Project Design Brief

ACO KS100 with polymer concrete channel with stainless steel edge rails were selected to provide a solution that could withstand the oil and gas spills and the constant movement of vehicles in and out of the service station.

Benefits

- The ADA compliant ductile iron grates will hold up to the hazardous spills and corrosive liquids.
