

ACO. creating
the future of drainage

PORTFOLIO

Smothers Waterfront Park Owensboro, KY

Opened in August 2012, Smothers Park covers an area measuring five acres along the Ohio River. The wide pedestrian promenade along the river will eventually extend west to the new convention center. Along the promenade are signature fountains featuring a water show every 15 minutes.

Project Design Brief

The elevated fountains provide an excellent area for trench drains as they were kept out of the main pedestrian thoroughfare and could be incorporated into the design of the large paved area. They would not only remove any overflow and over spray from the fountains but would provide a general surface drain for stormwater collecting on the paved walkway.

Benefits

- ACO KlassikDrain K100 and 479Q ADA ductile iron mosaic grate provide Load Class C strength which is up to 56,202 lbs or 1,934 psi.
