

ACO. creating
the future of drainage

PORTFOLIO

University of South Carolina Honors Residence Columbia, SC

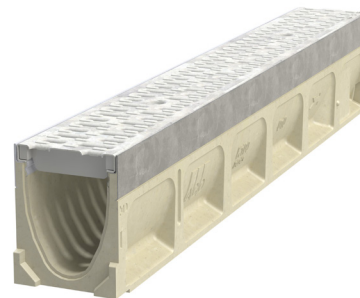

The University of South Carolina Honors Residence houses about 500 students and was built to provide a live, learn, work and play building in order to keep students and faculty, happy during long hours of class and studying while providing conveniences not found in other dormitories.

Project Design Brief

After heavy rainfall and snow in winter, water was ponding and causing a danger to pedestrians. ACO KlassikDrain K100 was installed around steps and along walls to aid drainage in these areas and prevent slip hazards. The galvanized steel slotted grates are safe and able to withstand the pedestrian traffic in the area while providing adequate water intake for the drain

Benefits

- The ADA compliant grates would withstand a high volume of pedestrian traffic and any carts moving equipment around the stadium.
