### Townhomes on 50<sup>th</sup> West Salt Lake City, UT

The new townhouse development at 50<sup>th</sup> West Salt Lake City, Utah, was concerned about flooding in the parking lot. To remedy the problem, a drainage system that allows stormwater to be absorbed and filtered underground is necessary.

#### Project Design Brief

After extensive research and product comparison, ACO's StormBrixx<sup>®</sup> HD was chosen over another competitor's product. The StormBrixx<sup>®</sup> HD infiltration system was chosen for its 95% void ratio, storage efficiency, and capacity. The system is easy to install and does not require any heavy machinery. The lead contractor was impressed with how simple it is to assemble the cell bodies.

#### Benefits

- The system is modular and light-weight and requires no heavy equipment for installation or rock for structural stability.
