Brickslot with K100S channel
Barghausen Consulting Engineers, Kent, WA
Sierra Construction Company, Inc., Woodinville, WA

The historic downtown area of Auburn, Washington is going through a revitalization process to bring more life into the area. One of the areas is building a three-story office and medical complex with an inviting entrance and lots of brick pavers.

Because of the brick pavers, the contractor needed to find a trench drain system that would be discreet and not take away from the aesthetics of the area.

ACO's Brickslot with K100S channel was chosen for the job because it is a discreet drainage solution for use with brick or stone pavers. The trench drain was run in a segmented curve. The ADA compliant 7/16" slot blends in with the paving joints giving an aesthetic solution.

Additionally, Brickslot can withstand light duty applications, so it is ideal for pedestrians to walk the historic downtown area.
