

ACO. creating
the future of drainage

PORTFOLIO

Auburn Professional Center Auburn, WA

To bring more life to the area, the historic downtown area of Auburn, Washington went through a revitalization. One of the areas built a three-story office and medical complex with an inviting entrance and lots of brick pavers.

Project Design Brief

The contractor needed to find an aesthetically appealing drain system that would work with the brick pavers. ACO's Brickslot was chosen for it's discreet design that is built to be used with brick or stone pavers. The trench drain was run in a segmented curve. The ADA compliant 7/16" slot blends in with the paving joints giving an aesthetic design.

Benefits

- Brickslot is designed to compliment the surrounding aesthetic.
- Brickslot can withstand light duty applications, so it is ideal for pedestrians to walk this historic downtown area.
