

ACO DRAIN

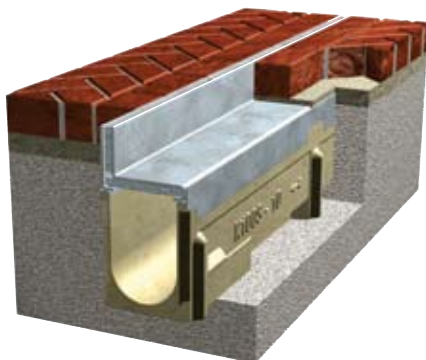

Beachwood Place Beachwood, OH

ACO PORTFOLIO

Product:

Brickslot with K100S channel

During the refurbishment of Beachwood Place Shopping Mall, NE Ohio, a surface drainage system was needed to prevent rain water run-off collecting around the entrance and outside eating area of a new restaurant. The general contractor was concerned a point drain would not collect all water and ponding would occur. It was determined that a trench drain system would offer a better solution.

The trench run had to fit with the slab pavers being used, and needed to follow a sweeping radius. The drainage system would also be required to withstand the occasional restaurant delivery and table linen collection/drop-off, ACO's discreet and aesthetic Brickslot system was chosen as the best option.
