Brickslot with K100S channel

When the design plans for the shopping mall was changed from an indoor to an outdoor venue a surface drainage system was needed around the walkways and fountain areas to drain rainfall.

A trench system was the best solution as the pavers would be easier to install with simple 2-way slopes rather than 4-way falls required for area drains. Brickslot was specified as it provides discreet drainage.

Brickslot is a trench drain system specifically designed for brick and stone pavers. The 1/2" flared slot not only blends in with the paving joint, but also prevents debris from being trapped and blocking the opening. A removable access cover provide full access for maintenance.
