

ACO. creating
the future of drainage

PORTFOLIO

Golden Gate Bridge San Francisco, CA

The Golden Gate Bridge Visitor's Experience Center was newly renovated to give guests information related to its tremendous 746' tall towers, sweeping main cables, signature International Orange color, and Art Deco Styling.

Project Design Brief

This job required the designer to incorporate a drainage system with the aesthetics of the area in mind. The drainage needed to blend in with the brick paver hard scape. ACO's Brickslot was a perfect choice for that requirement because it was designed specifically for use with brick or stone pavers to blend into its surrounding area. The discreet slot opens up underneath to a polymer concrete sloped drainage channel.

Benefits

- Brickslot has an access unit that provides discreet access to the channel and catch basins for cleaning and maintenance of the drainage system.
