

ACO. creating
the future of drainage

PORTFOLIO

National Mall, Lincoln Memorial, Granite Steps Washington, DC

The Lincoln Memorial is a US National memorial built to honor the 16th president of the United States, Abraham Lincoln. The memorial is on the western end of the National Mall, across from the Washington Monument.

Project Design Brief

In order to maintain the aesthetics and importance of the memorial, a discreet drainage system was required. ACO's Brickslot was a perfect choice for that requirement because it was designed specifically to blend into its surrounding area. The discreet slot opens up underneath to a polymer concrete sloped drainage channel.

Benefits

- Brickslot is a discreet trench drain specifically designed for brick and stone pavers.
- The 3/8" flared slot is discreet and also prevents debris from being trapped and blocking the opening.
