

# ACO DRAIN

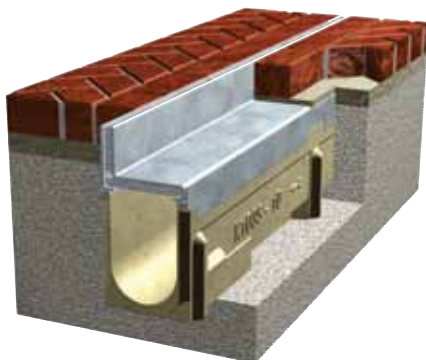

## UNC of Wilmington Chancellor's Walk Wilmington, NC

### PROJECT PORTFOLIO

**Product:**  
**Specifier:**  
**Contractor:**

***Brickslot with K100S channel***  
***The John R. McAdams Company, Research Triangle Park, NC***  
***Skinner Smith Construction, Wilmington, NC***

Chancellor's walk, at UNC's main campus in Wilmington, is a highly trafficked pedestrian area. During the installation of new brick pavers an attractive drainage solution for the pedestrian area was required that would not take away from the beauty of the area, or from the brick pavers used in the installation. Additionally, a drainage solution needed to remove rain water quickly

so the safety of the students and faculty would not be at risk.

ACO's Brickslot with K100S channel was chosen because it is a discreet drainage solution specially made for use with brick or stone pavers. Access covers are used over the catch basins to aid in maintenance of the brickslot and ease the removal of debris.
