

ACO DRAIN

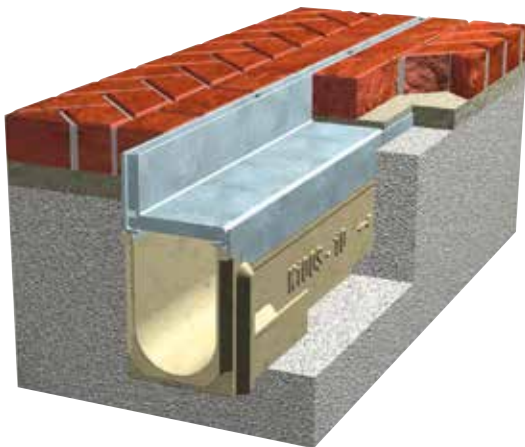

United States Institute of Peace Washington, DC

PROJECT PORTFOLIO

Product:

Brickslot with K100 neutral channel

The new construction at the United States Institute of Peace building in Washington, D.C. called for a discreet trench drain system for the pedestrian area that would not take away from the brick pavers or natural landscape of the area.

ACO's Brickslot with K100 neutral channel was chosen for the job because its slot allows it to blend

between the paving joint and not distract from the aesthetics of the landscape.

Access units were added to the trench drain run to ease maintenance and cleaning of the drains.
