

ACO. creating
the future of drainage

PORTFOLIO

Burger King Phoenix, AZ

Burger King is an American multinational chain of hamburger fast food restaurants.

Project Design Brief

ACO, Inc. replaced a CMP design in a tight, traffic bearing space with existing infrastructure. The design engineer elected to use the StormBrixx® system in place of CMP due to immediate availability of the product and ease of installation on the jobsite. Since the StormBrixx® HD system is 95% storage efficient, the entire 1,692ft³ system fit into a compact 29' x 9' x 6' footprint.

Benefits

- The system is modular and lightweight and requires no heavy equipment for installation or rock for structural stability.
- The system is stackable in increments of 2' and access units are designed to fit within the matrix using layer connectors.
