we care for water

PORTFOLIO

Canyons Village Park City, UT

Canyons Village is a mountainside lodge in Park City that hosts a variety of events, festivals, and performing arts. Skiing, snowboarding, and the Sundance Film Festival are the three most wellknown attractions in Park City.

Project Design Brief

StormBrixx® HD was used to replace an existing CMP configuration. The lead engineer chose to include a sediment forebay, which adds a wrapping to the inlet cells around the patented access unit with non-woven filter fabric for sediment isolation. This process of sediment control does not require any extra equipment or area that an arch chamber system would require for the same sediment control.

Benefits

- StormBrixx® HD eliminated roughly 18 truck loads of stone and reduced the space needed for storage during construction.
