

ACO.

we care for water

PORTFOLIO

Maple Mountain Estates Spanish Fork, UT

The Maple Mountain Subdivision developers were searching for a system that would run beside the road between the curb and the sidewalk. A water infiltration system was required to prevent water from accumulating on the road and on the sidewalk.

Project Design Brief

At first, a competitor's product was recommended, but the city required access throughout the entire system, ACO StormBrixx® HD was the only solution that could fulfill that requirement. The system is incredibly light, requiring no heavy machinery or rock for structural support. The pooled water on the street and sidewalk is used by ACO StormBrixx® HD to permeate the earth on the planter strip and keep plants alive.

Benefits

- StormBrixx® HD has a 95% void ratio and is light-weight making the system easy to install.
