

ACO.

we care for water

## PORTFOLIO

### Masala Avenue Modesto, CA

The City of Modesto's Director of Public Works needed a solution to deal with significant floods in the city. Masala Avenue was the first and most critical problem area. The current drainage system had collapsed, flooding the whole residential neighborhood. Residents were unable to leave their homes since the water was up to 4 feet high on the street.

#### Project Design Brief

ACO provided expert consultation and proposed a solution to the city's problems. ACO assisted the city in the design of the new system, which included the use of ACO StormBrixx® HD for infiltration. The engineers were particularly interested in the flexible configuration. After installation was complete, StormBrixx® HD attained a total storage capacity of 3,520 ft<sup>3</sup>.

#### Benefits

- StormBrixx® HD has a 95% void ratio and is light-weight making the system easy to install.
