

ACO. creating
the future of drainage

PORTFOLIO

Salisbury Regional Airport Salisbury, MD

When Salisbury Regional Airport needed a drainage system that could support fast moving, heavy traffic, HD200 was utilized.

Project Design Brief

MonoBloc is a monolithic 8" (200 mm) wide sloped system. The single piece construction removes the concern of components vibrating loose when frequently trafficked by high speed vehicles.

Benefits

- MonoBloc's monolithic nature means there are no grates that could become loose due to dynamic loading.

ACO Infrastructure

MonoBloc HD200
