

ACO SPORT

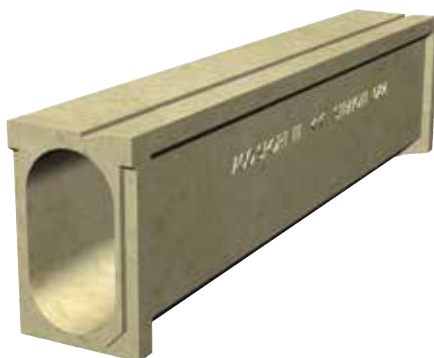

Coppin State University Baltimore, MD

PROJECT PORTFOLIO

Product:

System 2000 slotted system

Coppin State University's new multi-purpose field and 400-meter outdoor track required a trench drain to maximize track life and ensure efficient drainage during and after inclement weather.

ACO Sport System 2000 was chosen because it is available in straight and radiused sections with matching in-line catch basins to

provide a continuous run around the entire running track.

Additionally, System 2000 is safe for athletes to run across during games.
